

IMPROVED DUAL CONTAINMENT FLAPS

Abstract

Improved absorbent garments having dual containment flaps are provide.

5 The improved absorbent garments comprising dual containment flaps have reduced leakage if the inner containment flaps and outer containment flaps have substantially equal tension. Reduced leakage is also exhibited if the inner containment flaps and outer containment flaps have substantially equal height. In a preferred embodiment, absorbent garments of the present invention have dual
10 containment flaps, wherein the inner containment flaps and the outer containment flaps have substantially the same tension and substantially the same height.
